公司簡介

Company Introduction

We're in a world where traditional broadcast, broadband and mobile entertainment services are converging. Consumers want more HDTV and streaming video services -and on any device, on their timetable.

We share in this vision.

At Entropic, our mission is to transform consumers' whole-home entertainment experiences. As a world innovator in semiconductor solutions for the connected home, we're empowering today's operators with advanced enabling technologies that power both traditional broadcast and streaming video delivery into and throughout the home, and on the go.

We offer a diverse portfolio of highly-efficient silicon and software solutions that fuel innovation to power the shift from traditional broadcast to streaming, IP-based video delivery.

As the only pure play connected home entertainment company, Entropic delivers next-generation home networking, set-top-box,

satellite and broadband access solutions to enable today's leading cable, telecommunications, satellite and over the top (OTT) operators the ability to advance the way content is brought into the home and distributed throughout the home; empowering consumers to experience, view and share HDTV and streaming entertainment as well as personal content (movies, music, games, and photos) - whether on connected or wireless devices.

Entropic Communications is a co-founder of MoCA (Multimedia over Coax Alliance), and is recognized for advancing the way HD video is delivered over a single coaxial cable.

To support our success and continued growth we are seeking intelligent, passionate professionals to add to our team.

主要商品／服務項目

Our diversified portfolio of products includes:

Home Networking: Creating a no-compromise home entertainment experience, Entropic's home networking silicon, -based on the MoCA standard, is the most prominent, reliable and widely distributed wired home networking standard available.

Set-Top-Box SoC: New market demands are driving new emerging services. Specifically, OEMs and service providers are seeing HD interest rise, innovation in video services and a blending of multi-screen broadband, driven by consumers' interests for multi-room DVR, OTT content, and other advanced new broadcast and streaming services.

Digital Broadcast Satellite: Satellite service providers interested in simplifying the installation, upgrade and deployment of DVR and digital sharing services benefit from Entropic's innovative Satellite Outdoor Unit Channel Stacking Switch (CSS) solution.

Broadband Access Solutions: Entropic's c.LINK Broadband Access silicon, based on its field-proven MoCA technology, is ideal for Ethernet-over-Coax (EoC) implementations and answers the growing

need for a high-performance, cost-effective, future-proofed video delivery technology for multiple dwelling units (MDUs).

經營理念

Our mission is to transform consumers' whole-home entertainment experiences. As a world innovator in semiconductor solutions for the connected home, we're empowering today's operators with advanced enabling technologies that power both traditional broadcast and streaming video delivery into and throughout the home, and on the go.
